Simplify your network complexity with Ethernet

What is Ethernet?
Multi-purpose network

Ethernet delivers connections to new and existing services for ease of integration with your emerging applications:

- A universal technology with a familiar look and feel making it easy to connect and run.
- Works the same in the LAN, MAN or WAN so it's familiar and easy to deploy.
- Supports bandwidth intensive applications like VoIP, Video, storage and data center consolidation.

Network on Demand

Network on Demand customers can rapidly scale and provision network services with direct self-service access:

- Quickly improve traffic flow, reduce congestion as your business changes.
- Real time access to your network for faster service deployment.
- Frees up IT resources to focus on your core business. Remote locations

## Handle more data, more bandwidth, more end-points, and bigger workloads

Ethernet options

Switched Ethernet
- Connect locations together as if they were on one LAN.
- Fully meshed or hub and spoke design.

On-demand portal

Ethernet

Headquarters

Hybrid
- Combination of Ethernet WAN and as access to other networks.
- Provides on-ramp to the Internet and VPN.

Ethernet

AT&T VPN

Internet

Dedicated Ethernet
- A two location connection that's fast and highly secure.
- High speed for constant exchange of information.

Data Center

Why Ethernet?

AT&T Ethernet can grow with you from megabits to gigabits, from 2 sites to hundreds of sites.

Ethernet advantages

Speed
- WAN speeds with multiple Gigabits.
- Increase network capacity for heavy traffic loads.

Productivity
- On-demand network for faster response times.
- Simplify IT with a self-service portal.

Control
- Customer controlled routing and IP addressing.
- Manage and prioritize critical applications in-house.
